This building is made from **Limestone**. This white or light grey stone looks different from the golden tan Sandstone on the other buildings you will see on your tour.

When limestone is formed in the earth small water creatures get trapped. Their bodies decay but they leave a pattern behind in the rock. The pattern of their body shapes are called **fossils**.

Here is an example of a fossil found on the outside wall.

When you find one, draw its picture here.

3. THE CALGARY PUBLIC BUILDING

The Calgary Public Building was Calgary's Main Post

Office. When mail passed through the post office, they were "cancelled" so the stamp could not be reused. The cancellation tells you the city and date it passed through. We can follow a letter's journey from one place to another. In the 1930s, the 3¢ King George VI stamp was used. On special occasions the 50¢ Bluenose stamp was used. This stamp is one of the most valuable among stamp collectors.

How much does it cost today to mail a letter in Canada?
